

ELVYS CARRERA

Data Engineer | ETL/Backend Automation | AI Workflows

Guatemala / Remote | +502 3088-7081 | elvysalfredo10@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Systems Engineer with 3+ years across data analysis, junior data engineering, and AI/backend automation. Experienced designing and supporting ETL/ELT workflows, Python automation, advanced SQL queries, relational databases, APIs, and BI-ready datasets. Hands-on with SQL Server, Azure SQL, PostgreSQL, Hadoop, Pentaho, Power BI, FastAPI, AWS Lambda, API Gateway, Postman, Git, and LLM-based automation workflows. Known for forensic attention to detail, data validation, query performance improvements up to 85%, technical documentation, and ownership in Agile/Scrum environments.

CORE SKILLS

Data Engineering: ETL/ELT, data pipelines, data validation, data quality, deduplication, workflow automation, batch/hourly/near-real-time processing

Programming & APIs: Python, Pandas, SQLAlchemy, PyODBC, FastAPI, REST APIs, API integrations, Postman, JavaScript/TypeScript, Node.js/npm ecosystem

SQL & Databases: Advanced SQL, SQL Server, Azure SQL, PostgreSQL, relational modeling, query optimization, schema-aware transformations, performance tuning

Cloud, BI & Tools: AWS Lambda, API Gateway, Redis, Hadoop, Pentaho, Power BI, Git/GitHub, Agile/Scrum, technical documentation

PROFESSIONAL EXPERIENCE

AI Developer | SteamOps | 2026 - Present

- Develop and test AI-powered workflows, LLM-based automation, and API integrations for business processes.
- Support conversational AI systems by connecting backend services, external APIs, and validation logic to AI-ready workflows.
- Build and validate cloud/API automation patterns using AWS Lambda, API Gateway, FastAPI, Postman, PostgreSQL, and Redis.
- Collaborate with technical and operations teams in Agile/Scrum environments, documenting logic, dependencies, and test scenarios.

ETL Backend Developer | Atento | 2024 - 2026

- Designed, developed, and supported data pipelines using Python, SQL, and Pentaho for operational and business intelligence workflows.
- Orchestrated ETL workflows with daily, hourly, and near-real-time execution, improving data availability for reporting and operations teams.
- Integrated data from APIs, web applications, relational databases, and internal systems into standardized datasets for downstream analytics.
- Optimized complex SQL queries and data preparation logic, reducing execution times by up to 85% in key workflows.
- Implemented data validation, deduplication, quality controls, and documented business rules to improve trust in recurring datasets.
- Administered and monitored Azure SQL production environments, supporting reliability, performance, and troubleshooting of reporting data flows.

Data Analyst | Flowing Rivers / Claro | 2023 - 2024

- Created SQL queries for process monitoring, job monitoring, and early detection of failures in data flows using the Hadoop ecosystem.
- Analyzed recurring operational issues, supported incident identification, and helped improve the reliability of reporting and data processes.
- Supported KPI monitoring and operational reporting by translating business questions into structured data analysis.

SELECTED PROJECTS

Multi-Source KPI Automation Platform | *Python, SQL, ETL, data validation, Power BI support*

- Automated collection, transformation, validation, and consolidation of agent performance metrics from multiple client accounts and data sources into a unified reporting destination.
- Improved metric consistency, reduced manual consolidation work, and created a more reliable foundation for multi-client KPI analysis.

AI Appointment Scheduling API Workflow | *Python, FastAPI, AWS Lambda, API Gateway, REST APIs, PostgreSQL, Redis*

- Supported serverless API workflows for availability checks, appointment operations, rescheduling, cancellation, authentication, and AI conversation integration.
- Validated endpoint behavior with Postman and improved reliability between AI systems and external business APIs.

ETL Data Validation Automation | *Python, Pandas, SQL Server, SQLAlchemy, PyODBC*

- Created Python and SQL-based automation logic to clean, validate, deduplicate, and prepare recurring operational datasets for analysis and reporting.

EDUCATION

Bachelor's in Systems Engineering - Universidad Mariano Galvez, 2018 - 2023

Master's in Cybersecurity - Universidad Mariano Galvez, 2024 - 2025

ADDITIONAL INFORMATION

- English: Advanced / Professional Working Proficiency.
- Certifications: available through portfolio certificate section.
- Target roles: Data Engineer, ETL Backend Developer, AI Automation Developer, BI/Data Platform Engineer.
